## Blog

### Starpath

Posted by admin on February 18, 2014

*Starpath* is an initiative to catalog celestial-themed objects in the community. Participants simply use a phone app to photograph, describe, and map the location of the hidden treasures in the built environment.

#### Download the Free Phone App

To participate in the *Starpath* project, download the phone app from Epicollect. Here are [Instructions](#), or go specifically to:

#### Loading *Starpath* on an Adroid Device

<http://www.epicollect.net/instructions/Android/AndroidLoadProject.html>

#### Loading *Starpath* on an iPhone

<http://www.epicollect.net/instructions/iPhone/iphoneLoadProject.html>

#### Embark on the hunt.

That's it. You're ready to embark on a quest in the nooks and crannies of the neighborhood. As you're walking around, if you see a reference to something astronomical, enter your user name, give the object a descriptive name, snap a photo, and save. As an option, you can add any nearby landmarks or intersections, give a longer descripton of the object, and write any comments. You may want to indicate whether it's inside or outside, in a public or private space, visible only from a certain angle, etc.

The resulting data can be viewed either on the [Project: Starpath web page](#) or directly on the user's phone. A Google map automatically plots the locations with accompanying images and details.

By pooling our resources we hope to uncover a trove of celestial features that can be used for education and public outreach at a later date. Thanks for your contribution to the hunt.

Images below are examples of astronomically-themed items in the region.
